

What's the Story?

NAME _____

Picture 1

Picture 2

Conduct a Survey

1. Show the pictures to at least two people (one adult and one child.)
2. Ask each person to tell you a mathematics story that describes what is happening in each picture. Be careful to make sure that none of the people you survey can hear the other people's stories.
3. Ask each person to give you a number sentence to go along with each of their stories.
4. Write the stories and the number sentences on the data-recording sheet. Use a different recording sheet for each person you survey.
