

# Classifying Numbers

NAME \_\_\_\_\_

Look at the Venn Diagram below.

1. Find at least five numbers that belong in each region of the diagram. Think about what numbers belong in the intersection of the circles and what numbers belong outside the circles.
2. What factors do the numbers in the intersection of the circles have in common?

3. Look at the Venn diagram below. A new circle, labeled “Multiples of 5”, has been added. Replace your numbers in the correct regions, and make sure you have at least two numbers in each region of the diagram.
