

# Let's Work Together

NAME \_\_\_\_\_

Dear Parent:

We have discovered many interesting things about geometry, especially the unique characteristics of triangles. We made triangles by solving problems, combining other shapes, measuring, and taping paper strips together. Students have discovered interesting number patterns through their investigations.

Below is a set of geometric shapes known as a *Tangram Puzzle*. Let your child show you how many different geometric figures can be made with two, three, or four of the shapes. Work together to build triangles with two, three, four, five, six, or all seven of the shapes. Make discoveries together!
