

Melanie has 4 different colored crayons and 2 different boxes as shown below. How many different ways can Melanie put all 4 crayons into the 2 boxes so that each box has at least 1 crayon?

## Solution: 14 different ways.

We can count in an organized way. First we put one crayon in the star box and the other 3 in the circle box. This gives us a total of 4 ways. Next we put 2 crayons in each box. This gives us a total of 6 ways. Finally we put 3 crayons in the star box and 1 crayon in circle box. This gives us a total of 4 ways.

| the star box | The circle box |
| :---: | :---: |
| $R$ | $\mathrm{Y}, \mathrm{B}, \mathrm{G}$ |
| Y | $\mathrm{R}, \mathrm{B}, \mathrm{G}$ |
| B | $\mathrm{R}, \mathrm{Y}, \mathrm{G}$ |
| G | $\mathrm{R}, \mathrm{Y}, \mathrm{B}$ |
| $\mathrm{R}, \mathrm{Y}$ | $\mathrm{G}, \mathrm{B}$ |
| $\mathrm{R}, \mathrm{G}$ | $\mathrm{Y}, \mathrm{B}$ |
| $\mathrm{R}, \mathrm{B}$ | $\mathrm{Y}, \mathrm{G}$ |
| $\mathrm{G}, \mathrm{B}$ | $\mathrm{R}, \mathrm{Y}$ |
| $\mathrm{Y}, \mathrm{B}$ | $\mathrm{R}, \mathrm{G}$ |
| $\mathrm{Y}, \mathrm{G}$ | $\mathrm{R}, \mathrm{B}$ |
| $\mathrm{Y}, \mathrm{B}, \mathrm{G}$ | R |
| $\mathrm{R}, \mathrm{B}, \mathrm{G}$ | Y |
| $\mathrm{R}, \mathrm{Y}, \mathrm{G}$ | B |
| $\mathrm{R}, \mathrm{Y}, \mathrm{B}$ | G |

In all, there are 4+6+4=14 different ways to put the crayons in the boxes.
